

NBA Season Explorer

Create a web page which draws a line chart of points scored over time for user-selected NBA team(s)

Features:

- Ability to select multiple teams. Draw multiple lines on the same chart
- Ability to show only points scored as visitor, home or both
- Refresh the chart immediately when user changes the filter
- Provide a simple text area where the user can paste the data to plot

Guidelines

- use the supplied CSV file for sample format and data
- implement the page only with client-side technologies, no need to supply server-side.
- you can use any libraries that help implementing the task easier (eg. suitable charting library, UI framework, styles)
- use modern web framework of your choice that will allow easily adding more features to the task.
